PLAN 1:2

SECTION A–A 1:1

(its part from r 0 to 83)

REVISIONS

Rev	Date	Description
A	2026-10-11	First issue, draft for quotation

status	PROPOSED · the first cut, on the record's 940 mm stack-up: to re-cut on the layout (ledger §6, item 71)
qty per machine	1
used in	DRV-100
source	docs/drive-gear-belt.md §5, §7, §8; sim/unmodelled_parts.py gear_case
bosses	3 × Ø56 at the pinions' axes (30° / 150° / 270°; drawn at 0° / 120° / 240°), faces at r 76, 60 above the floor's underside; bores Ø32 H7; three M4 × 10 on PCD Ø40 each
floor	17 thick: the seat Ø52 H7 × 15 from the top, the lip Ø40 × 2 under it
flange	Ø168 × 8 at the floor; three M6 from below on PCD Ø154 at 120° / 180° / 240°
mass each	1.52 kg

3-D view (axonometric, not to scale)

NOTES

1 The carrier of the reverser and the frame's bottom end-bearing housing (§5, §8): it takes the gear's 1.0 N·m steady, 5.2 N·m at the driver's limit, into the base plate.
2 The locating 6205-2Z in the floor: the seat Ø52 H7 × 15 from the top on a lip Ø40, which takes both bodies' weight (689 N, §7); the retaining ring (DRV-190) over it on three M3 at PCD Ø58.
3 The bosses at the pinions' axes (30° / 150° / 270°, 60 above the floor's underside) carry the cartridges (DRV-105); three M6 come up from under the base plate, through the bell, into the floor's flange Ø168 [IR: the first cut's case is the Ø144 barrel; the bosses and the flange are this drawing's].
4 The top lip's bore Ø88 is the labyrinth over the hub; grease POM-compatible, the case closed.
5 Status: the first cut of docs/drive-gear-belt.md on the record's 940 mm stack-up (z from the record's bottom end-bearing slot); the ledger asks for the drive to be re-cut on the layout (§6, item 71). PROPOSED.
6 General tolerances ISO 2768-mK; dimensions in mm; do not scale. Views by hidden-line removal of the model's solids.
