NOTES

1 The machine stands on its axis, side B above. z from side A's end; the hub's centre at z 507; 1014 mm (sim/bridge_ring_bearings.py placement).
2 Two bodies: the rotor (the shaft, the hub, the decks, Ca / Cb, the rotor vanes, the utrons) and the counter-rotor (the cage, the stator vanes, the spiders, the bridges and bridge rings), geared 1 : -1.
3 The balloons name the sub-assemblies; each has its own sheet. The drive (DRV-100, DRV-120) is not placed here: its first cut stands on the record's 940 mm stack-up (ledger §6, item 71).

3-D view, a quarter cut away; the reference parts left out (axonometric, not to scale)
